**Reflectance Measurement and Emittance Coefficient Report by the
 Department of Physics of the University of Athens**

The laboratory of the Built Environment Studies Group, Department of Physics, University of Athens, has carried out reflectance measurements in the 300-2309nm spectrum and emittance coefficient in infrared radiation for the company **NEOTEX SA**, on the basis of a contract signed between the National and Kapodistrian University of Athens – Special Research Fund Account and NEOTEX SA on 10 January 2011. The measured samples were applied on 7cm x 7 cm aluminum tiles and had the following features:

- White-coloured sample under the trade name: NEOTHERM
- White-coloured sample under the trade name: NEOROOF
- White-coloured sample under the trade name: SILATEX REFLECT

The laboratory of the Built Environment Studies Group certifies that on 8 February 2011 the samples were found to have:

| Sample | Solar reflectance SR (%) | Infrared emittance coefficient e (±0.02) | Solar reflectance index SRI |
|----------------------------|---|---|--|
| NEOTHERM | 88 | 0.86 | 111 |
| NEOROOF | 88 | 0.86 | 111 |
| SILATEX REFLECT | 88 | 0.86 | 111 |

The measurements were taken on the basis of the international standards ASTM E903-96 and ASTM G159-98 for reflectance, while a UV/VIS/NIR

ΕΠΙΣΗΜΗ ΜΕΤΑΦΡΑΣΗ TRADUCTION OFFICIELLE OFFICIAL TRANSLATION

(Cary 5000) spectrophotometer was used, which was equipped with a labsphere, and ASTM Standard E408-71 for the emittance coefficient, while a special measurement instrument was used for infrared emittance coefficient, Emissometer Model AE (Devices & Services).

Date: 9 February 2011
